

# CASE STUDY

## Conveyor Systems vs. Truck Hauling

# The case for conveyors

**CHALLENGE:** Site limitations like roadways, water and railtracks, cost of loading and haul equipment, safety and municipal approvals all factor in when determining the best method to transport your material in your operation. Many times the cost to transport with conveyors is less than the cost of new rolling stock and truck driving labor.

**SOLUTION:** Our custom conveyor systems include overland conveyors that can span miles over water, road or railways, barge and railcar loading and unloading systems that unload or deliver product and radial stackers and telescopic stackers that stockpile your product - all working together to get your material to it's destination, safely and efficiently.

**Let Kemper help you get the job done with a custom conveyor system**
