

CASE STUDY

Choosing the right portable plant makes the difference for 8s and spec sand

Better with Kemper

SPECS: Leased crushing and screening unit used for 8s and spec sand

CHALLENGE: Customer used a rental plant in multiple configurations with hours of downtime and struggled to make quality product. In several years of leasing, they spent twice as much on the rental as they would have on one new plant.

SOLUTION: Kemper recommended a Terex 1150S crushing and screening plant on a lease to own program to accomodate their cashflow. Tweaking the plant to maximize production of 8s, Kemper trained operators on-site at installation.

RESULTS: The new Terex 1150S doubled production almost instantly. The flexible lease to own plan allowed the producer to get up and running right away, making lease payments the first few months before obtaining capital funds for an outright purchase.
