

Better with Kemper

SPECS: Railcar loadout moving 1800-2200TPH of diabase stone

CHALLENGE: Customer's existing scales were off - car loading was inconsistent by 10's of tons per train car - up to 600 tons per train.

SOLUTION: Kemper recommended an Etheridge automated belt scale which includes daily tare calibration for accuracy (with just the push of a button) and installs in less than one hour. Etheridge scales are affordable and require little to no maintenance.

Since installation, our customer has not received a single call regarding incorrect railcar weights, meaning this one small tweak has increased both accuracy and efficiency by TONS per train!
